Who I Am

JOSE ANDREAS LIE
SOFTWARE ENGINEER

I specialize in scalable backend systems and deployment, using my full-stack knowledge in Figma, React, and Mobile to bridge the gap between complex logic and great user experience.

I am fueled by Problem Solving and a constant drive for Growth. Beyond the terminal, I am a cinematographer always looking for a new perspective or a better way to create."

What I Do

JOSE ANDREAS LIE
SOFTWARE ENGINEER

I am a T-Shaped Backend Engineer who architectures scalable data flows and bridges the gap between complex logic and user-centric design. By combining deep server-side expertise with a proactive DevOps mindset, I ensure applications are not only well-built but also seamlessly deployed and ready to scale.

My T-Shaped Skills

JOSE ANDREAS LIE
SOFTWARE ENGINEER

Project

JOSE ANDREAS LIE
SOFTWARE ENGINEER

AntarBul

Company

Hex & Code
(Apple Developer Academy)

Role

Lead Backend Engineer

Goal

A fast, effective pet-taxi platform
connecting owners with reliable drivers

Tech Stack

Node.js, PostgreSQL, GitHub, AWS (EC2), Docker

Key Insight

Acted as the sole backend engineer, negotiating system requirements with the frontend team to build a scalable foundation from scratch

Project

JOSE ANDREAS LIE
SOFTWARE ENGINEER

Nine to Six

Company

Aftersix

Tech Stack

Node.js, PostgreSQL, GitHub

Role

Backend Engineer Intern

Current Status

User Testing phase, focused on optimizing backend performance based on real-world data

Goal

A comprehensive HR Information System (HRIS) to streamline employee management

Project

JOSE ANDREAS LIE
SOFTWARE ENGINEER

BuahHati

Company

Buah Hati Team
(Apple Developer Academy)

Role

iOS Engineer

Goal

An AI-powered app to help users
identify avocado ripeness instantly

Tech Stack

SwiftUI, CoreML, SwiftData

Outcome

Successfully published on the App Store

Lesson

Gained deep respect for the iterative nature of training
accurate Machine Learning models

Where I'm Going

JOSE ANDREAS LIE
SOFTWARE ENGINEER

- Learn to orchestrating maintainable, containerized environments using Docker and Kubernetes.
- Strengthening backend resilience through DevSecOps and infrastructure hardening.
- Growing into Lead Engineering roles by bridging technical gaps.
- Mastering high-scale PostgreSQL optimization and advanced system architecture.
